

# Biotechnology Research

# Studies on Degenerative Diseases: Blindness and Alzheimer's Disease

Dr. Nora B. Caberoy  
Associate Professor  
School of Life Sciences  
Phone: 702-774-1501  
Email: [nora.caberoy@unlv.edu](mailto:nora.caberoy@unlv.edu)

## Expertise:

- Phagocytosis
- Retinal cell biology
- Retinal degenerative diseases (*Retinitis pigmentosa*, Age-related macular degeneration)
- Functional proteomics by phage display
- Alzheimer's disease therapy

# Delineating molecular mechanisms of blindness, hearing loss, and obesity

Mutation in Tubby gene resembles human syndromes:

- Hearing and/or vision - *Usher's*, *Retinitis pigmentosa*
- Obesity and sensory deficits - *Bardet Beidl*, *Alstrom's*
- Pathological mechanisms unknown

- Characterizing Tubby as a transcription factor
- Globally identifying genes regulated by Tubby
- Unraveling Tubby protein-protein interaction network

# Redirecting phagocytosis of amyloid beta from inflammatory to non-inflammatory pathway

## Alzheimer's Disease (AD): Pathological hallmarks

3. Massive brain inflammation

### Strategy:

- engineer hybrid proteins
- binds oligomeric and fibrillar amyloid beta
- sequesters and directs phagocytic clearance of amyloid beta through non-inflammatory pathway

# Integrative Physiology

## **Dr. Allyson Hindle**

Assistant Professor

School of Life Sciences

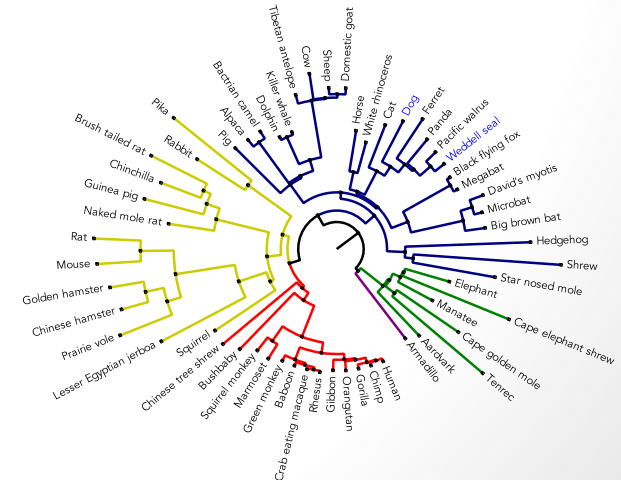

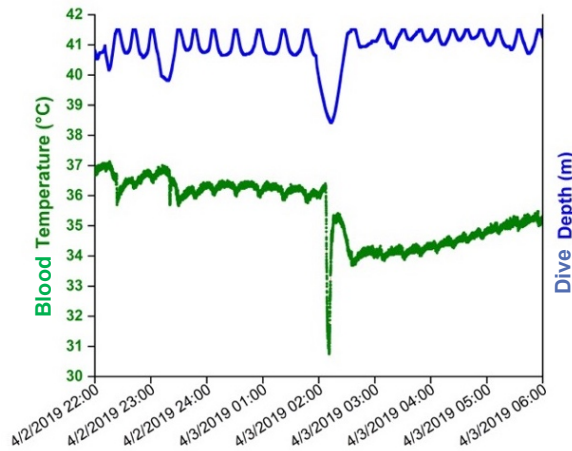

Phone: 702-895-4521

Email: [allyson.hindle@unlv.edu](mailto:allyson.hindle@unlv.edu)

## **Expertise**

- molecular mechanisms of hypoxia tolerance in hibernating and diving mammals
- cardiovascular and blood pressure regulation
- comparative genomics, biomarker discovery and bioinformatics
- cell line resource development for non-model systems

# Cardiovascular protection of deep divers

# Metabolic control of small hibernators

# Jun Yong Kang

- Assistant Professor, Department of Chemistry and Biochemistry
- Ph.D., Chemistry, Texas A&M University, College Station, TX
- CHE 217B, junyong.kang@unlv.edu
- [http://jkang.faculty.unlv.edu/?page\\_id=110](http://jkang.faculty.unlv.edu/?page_id=110)

## Areas of Expertise

- Synthetic organic chemistry
- Development of new synthetic methodology
- Asymmetric organocatalysis
- Organophosphorus chemistry
- Synthesis of bioactive small molecules

## Research Summary:

The development of new synthetic methodologies plays a key role in medicinal chemistry, biochemistry, and materials chemistry. Professor Kang and his group have been developing novel synthetic transformation and new chemical reagents such as commercially available NHP-thiourea and NHP-butane to apply for pharmaceuticals and bioactive molecules.

Kang's reagents-commercially available at Kerfast

**NHP-thiourea**  
(phosphonylation reagent)

**NHP-butane**  
(organocatalyst)

**NHPA**  
(organocatalyst)

# Ubiquitin-mediated protein degradation

**Dr. Gary Kleiger**

Professor and department Chair

Department of Chemistry and Biochemistry

[gary.kleiger@unlv.edu](mailto:gary.kleiger@unlv.edu)

<https://kleiger.faculty.unlv.edu>

## Expertise

- Structural biology
- Proteomics
- Enzyme kinetics and biophysical assays
- Cell biology

# Determining the structures of enzymes that promote protein degradation by cryo-EM.

# Uncovering how the enzymes that promote protein degradation function in human cells.

Kinetics help us understand how enzymes select protein targets for modification with ubiquitin.

High-resolution mass-spectrometry tells us how mutations in enzymes that lead to human disease affect the stabilities of key human cellular proteins.

Small molecule inducers of protein degradation can be used to treat human disease. We study the mechanism of how they function both in test tubes and cells.

# Novel chemistry and biology using highly ionizing radiation

**Michael Pravica, Ph.D.**

Professor of Physics

Department of Physics and Astronomy

Phone: (702)895-1723

Email: [michael.Pravica@unlv.edu](mailto:michael.Pravica@unlv.edu)

**Expertise:**

*Useful Hard X-ray photochemistry*

High pressure

Spectroscopy

*Ion Beam Nuclear Transmutation Doping*

*High quality synthesis of vaccines using tuned hard x-rays*

# Pravica Group Research

Radiation-hardened sensors/direct energy conversion devices for EXTREME CONDITIONS or tuned solar materials

## Useful hard x-ray photochemistry

Novel structures of known materials produced With hard x-rays and high pressure (e.g.  $CsO_2$ )

# High Pressure Fluorine Chemistry

5 GPa

Molecular mixtures at high pressure

X-ray induced combustion

## Inner shell chemistry at high pressure

Tuned Hard X-rays (> 7 keV)

Using tuned hard x-rays to damage viruses to create high quality vaccines by targeting specific molecular groups/bonds that resonantly absorb x-ray energy leading to decomposition chemistry.

# Advanced Numerical Methods for Moving Domain/Interface Multi-Physics Problems

**Dr. Pengtao Sun**

Professor

Department of Mathematical Sciences

Email: [pengtao.sun@unlv.edu](mailto:pengtao.sun@unlv.edu) ; URL: <https://faculty.unlv.edu/sun/>

## Expertise

- Numerical Solutions of Partial Differential Equations (PDE)
- Numerical Analysis (Well-posedness, Stability, Convergence)
- Finite Element/Volume/Difference Methods
- Scientific and Engineering Computing
- Fluid-Structure Interaction (FSI) Modeling and Simulation
- Fuel Cell Dynamics, Fluid Dynamics, Electrohydrodynamics

# Fluid-Hydro Turbine Interaction Problems

- Hydroelectric power generating system produces renewable energy and remains crucial for society and industry. The most significant part of this system is the hydro turbine interacting with the water flow, which involves elastic solid materials and viscous fluids and belongs to the category of fluid-structure interaction (FSI). The developments of mathematical models and numerical methodologies are critical in practice for efficient simulations of the hydro turbine, which in turn guides the design and evaluation.
- We approach the challenges in different aspects. First, based on the observation that the hydro turbine, although exhibiting large rotations, has relatively small deformation, we develop linearized elasticity equations that alleviate the burden on nonlinear solver and improves the well-posedness of spatial discretization. Second, we propose a new approach to solve the arbitrary Lagrangian-Eulerian mesh motion for rotating structure. Moreover, we analyzed the well-posedness and convergence of the finite element discretization and demonstrated the discretization is solver friendly.

# Hemodynamic Fluid-Structure Interaction (FSI) Problems

- FSI simulation has become the most promising solution method to solve the hemodynamic problem existing in the clinical cardiovascular system. However, the complexity of cardiovascular environment, the artificial heart pump model, the vascular rupture, the aneurysm progression and the aortic dissection cause the deficiency of the existing FSI simulation package towards the clinical demands.
- We devoted our research to the new modeling and numerical techniques for the bloodstream-vascular-stent graft/artificial heart pump interaction problems, aiming at overcoming numerical difficulties and challenges, and developed advanced numerical methodologies to improve the efficiency and accuracy of corresponding FSI simulations. and to deliver more instructive numerical results to medical professionals for helping out patients on an efficient and accurate diagnosis and treatment.
